# One Ocean Network for Deep Observation

## Our Mission

To provide integrated knowledge on the functioning of deep-sea ecosystems under global changes, to enhance efforts in mitigating natural disasters, and to engage citizens with a deep ocean increasingly under pressure due to human activities.

## About deep-sea street art

The initiative is funded under the Mutualised Interdisciplinary Projects (PIM) of the interdisciplinary graduate school for the blue planet (IsBlue) Programme. During one week, we put together a dozen of graduate students, deep-sea researchers/engineers and a street artist to bring a discipline of science from the dark to the streets.

With the support of
